

Secfone

Secure VoIP based mobile
communication for Android™
phones

Secfone is...

- Secure
- Cost effective
- User friendly

- Implementation of the proprietary patented MVCN™ authentication protocol
 - 1024-bit RSA for server and peer authentication
- Peer-to-peer communication
 - 448-bit Blowfish CBC for voice and data encryption

- Calls are VoIP based
 - Service available on Wi-Fi, HSDPA, UMTS, EDGE networks
- Flexible purchase scheme
 - Secfone is available with or without an authentication server as well as on a monthly subscription basis or paid in one instalment

- Excellent voice quality
 - Automatic codec selection according to type of network
 - Advanced echo filtering
- Advanced business features
 - Closed mobile communication system with own authentication server
 - Conference calls
 - Secure remote data access

- User-ready device, application and crypto-chip pre-installed on the phone
- The encryption keys are stored on the pre-installed crypto-chip
- Available on HTC Desire smart phones
- Available with an optional range of business features

- Installation of a closed mobile communication network by purchasing an MVCN™ authentication server
- Secure telephone conferencing
- Secure remote data access

Closed mobile communication network

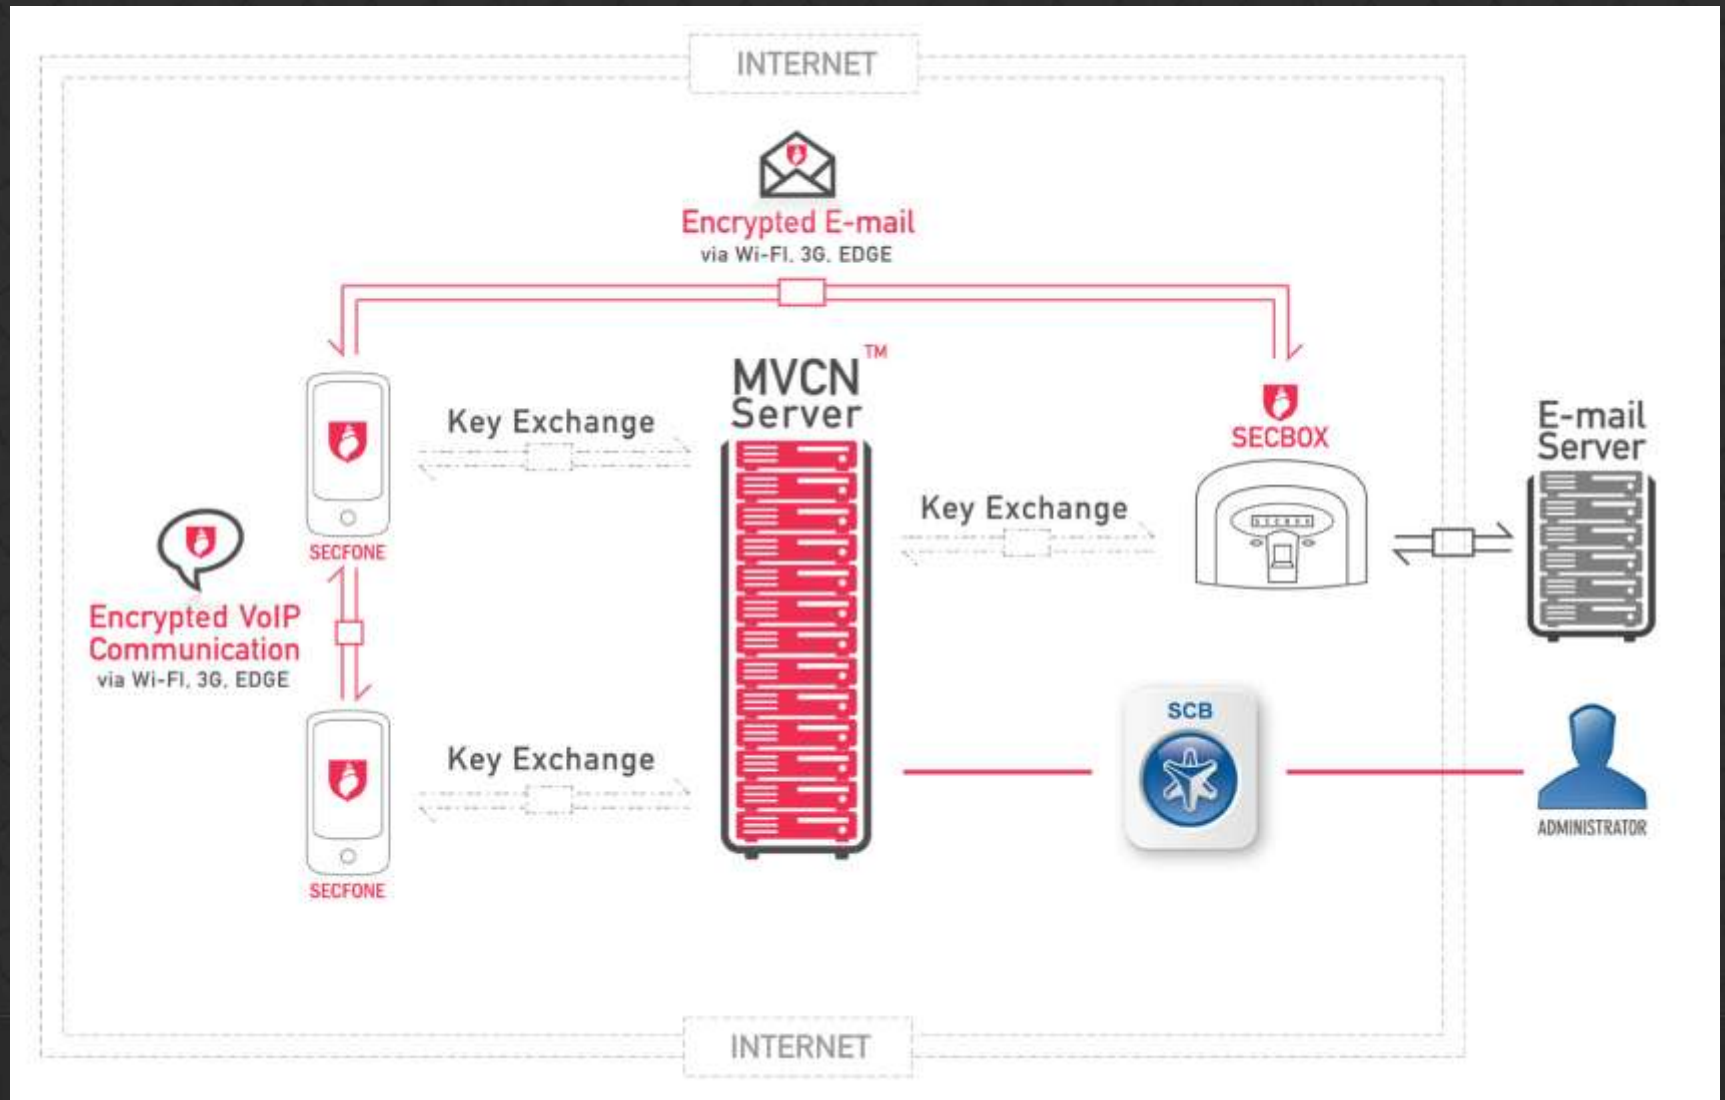

- Purchase your own MVCN™ authentication server
- Pair an optional number of devices to the server
- No devices outside the network (including Secfones not paired to the server) will have access to your communication

Secure remote data access

- Secfone allows secure access to e-mails or data bases from your phone
- The server holding sensitive information has to be connected to the Internet through the Secbox network security device featuring MVCN™ technology

Secure remote data access - Example

Secure teleconferencing

- Secure teleconferences
- Conference rooms accessed through Secboxes
- Up to 500 participants at one time depending on hardware set-up
- Voice messages can be left in the conference rooms

Thank you for your attention!
